

Chad Fact Sheet

Highlights of Operations

In 2000, Chevron became a partner in two major projects in Chad.

The first of these projects was the development of the Doba oil fields in southern Chad. The second involved construction and operation of a pipeline to transport oil from those fields to an export terminal facility in Cameroon for shipment to world markets. Together, they represent one of the largest industrial projects ever done in Africa.

The World Bank and nongovernmental organizations have been instrumental in the establishment of the project.

The Chad-Cameroon development project is helping to forge a strong relationship between these two nations. The project is having a major impact on the local economies of both countries.

During construction of the field facilities and the pipeline, the consortium employed more than 35,000 people. Between 2000 and 2004, more than \$700 million was spent locally and split nearly evenly between the two countries. As the project went forward, the partners also worked to preserve biodiversity and protect local people and their heritage.

Business Portfolio

Exploration and Production

Chevron has a 25 percent interest in an international consortium, which has been developing the Doba oil fields in southern Chad.

In 2008, total average daily production in the Doba complex was 127,000 barrels (28,000 net) of crude oil.

The complex includes the Bolobo, Miandoum and Kome fields, which began production in 2003; the Nya Field, which achieved first oil in 2005; and the Moundouli Field, which began production in 2006. Following a satellite field development project, the Maikeri Field began production in 2007.

In late 2008, the development application for the Timbre Field in the Doba Basin area was approved.

Pipelines

In 2003, Chevron and its partners inaugurated the Chad-Cameroon Oil Development and Pipeline project. Chevron has about a 21 percent interest in the two Cameroon affiliates that own the underground pipeline, which was completed one year ahead of schedule.

The pipeline transports previously landlocked oil some 665 miles (1,070 km), from the Doba oil fields in southern Chad to a floating export facility at Kribi, Cameroon, in the Gulf of Guinea.

There, the oil is shipped from a floating storage and offloading vessel, located 7 miles (11.3 km) offshore, for export to world markets. The pipeline has a capacity of about 225,000 barrels per day.

In the Community

Members of the Chad consortium support health and education initiatives on behalf of the community and the project employees.

These initiatives include HIV/AIDS and malaria education and prevention programs. Anti-cholera programs have focused on improved sanitation and potable drinking water. The partners also have built, refurbished and supplied clinics in the vicinity of the Doba oil fields and transported nurses to dozens of locations to administer polio vaccinations.

In the workplace, the partners have focused on the training and mentoring of national employees. And throughout the project, the consortium has worked in close consultation with local communities and placed a strong emphasis on contracting locally for maintenance, supplies, and other goods and services.

Record of Achievement

Chevron's involvement in the Chad-Cameroon project further demonstrates the company's commitment to fostering economic and social development in sub-Saharan Africa.

The project is providing jobs, local business opportunities and other benefits for the people of Chad and the greater region. National employees make up 85 percent of the project workforce.
