

Community Ambient Air Monitor Site **Location Criteria**

The site should have:

- Access to 60 Amp electric power service
- Access to phone line for data transmission
- Adequate security (vandalism, sabotage, etc.,)
- No large emissions sources (except mobile sources) between the monitor and the Chevron Refinery

The location should be:

- 300 feet from a major highway
- Away from local minor sources, such as restaurants, trucking sites, furnaces or incinerators
- Away from large buildings that would obstruct normal air circulation
- 60 feet away from the drip line of tree(s).
- Easy Access for maintenance/operation
