addressing climate change

We believe climate change is real and human activity contributes to it. We take prudent and cost-effective actions to manage climate change business risks, pursue opportunities to lower our emissions and develop lower-carbon energy. Managing climate change risks is an important element of our strategic focus to return superior value to stockholders. We believe Chevron’s governance, risk management and strategy processes mitigate risk and capture low-carbon business opportunities associated with climate change. We share the concerns of governments and the public about climate change and recognize the findings of the Intergovernmental Panel on Climate Change (IPCC) that the use of fossil fuels contributes to increases in global temperatures. We see the Paris Agreement as a step forward to meeting this global challenge.

invest in the future □
targeting breakthrough technologies

our framework for decision making

We proactively consider climate change in our business decisions and are committed to working with policymakers to design balanced and transparent greenhouse gas (GHG) emissions reductions policies that address environmental goals and ensure consumers have access to affordable, reliable and ever-cleaner energy.

climate change resilience

Read about the framework we use to think about climate change in relation to our industry, and specifically in relation to our business.

operational excellence

We instill a culture of operational excellence (OE) that places the highest priority on the safety and health of our workforce and on the protection of communities, the environment and our assets. We are committed to continually improving our environmental performance and reducing the potential impacts of our operations through the implementation of our Operational Excellence Management System.

our systematic approach to environmental management

[OEMS](#) [ES corporate process](#) [ESHIA corporate process](#) [environmental standards](#)

The environment is one of the six focus areas of our Operational Excellence Management System (OEMS), which puts into action our Chevron Way value to protect people and the environment. The OE objective for the Environment Focus Area establishes the priority for our global operations to assess and manage their significant environmental risks across the life of our assets.

[learn more about our OEMS expectations](#)

key ESG actions

Each year, we highlight key actions that reflect our company's values and demonstrate our commitment to long-term sustainability.

chevron protects biodiversity

Chevron has instituted a strict quarantine management system to protect biodiversity on Barrow Island. In addition to being a Class A nature preserve, the island off Western Australia is also home to Chevron's massive Gorgon natural gas development project.
