# VR: behind the scenes

---

human energy®

**On-screen copy:**

**Jack/St. Malo platform  
280 miles south of New Orleans.**

**Jamie:**

**This is the biggest facility for Chevron out here in the Gulf of Mexico. My priority is the people. We have family members that have started in and finished their careers out here in the oil industry and it's a part of our culture. We watch out for each other and end the day on a good note every day.**

**On-screen copy:**

**A new Virtual Reality experience is giving people everywhere the chance to visit this remote facility.**

**Sid:**

**The Virtual Reality tour crew showed up yesterday and they're videoing our facility, showing it off to the world.**

**Jamie:**

**And hopefully our families can be able to see exactly what we do and how it looks out here on the facility.**

**JJ:**

**Working in the middle of the ocean is more of a routine day to day lifestyle for myself. The most exciting part I think out of the whole Virtual Reality experience to bring home to my family is when they put them goggles on and they'll see that helicopter landing and taking off.**

**Sid:**

**When I tried Virtual Reality for the first time, I thought it was pretty cool. It's going to be really nice when they finish with it to show off the facility and show our families just what we do on a day to day basis.**
