

Supporting a Local Wildlife Center

Deborah Donovan-Niemi, Chevron Employee

Well, my name's Deborah, and I've been clearing out the garden at the Lindsay Wildlife Museum. I love gardening, and the volunteer group that's here is the Women's Network group.

Chris Bernard, Lindsay Wildlife Museum

Lindsay Wildlife Museum is a natural history museum. We take care of native California wildlife. We've been in existence for over 55 years. We take care of everything from Alameda whipsnakes to many, many thousands of baby birds every year during the bird season. We also have a great exhibit hall that's open five days a week. We also educate between 30,000 and 40,000 children every year. Our motto is basically learning to live with wildlife. We could not do our job without our volunteers.

Chevron Employee

I am out here gardening at the Lindsay Wildlife Museum. I'm having a great time. I love to garden; I love being outdoors, and this is a great little museum to just come out and visit.

Chevron Employee

They are having us pick up a lot of debris and cutting out a lot of the dead stuff that's here that doesn't belong here so they can replant in October-November.

Chevron Employee

I love gardening, so I jumped at this opportunity.

Interviewer

I noticed you knew the names of all of the plants when we were walking around earlier so this was the right opportunity for you.

Chevron Employee

Totally the right opportunity. This one came over the emails; yes that's me. I even brought my own clippers.

Deborah Donovan-Niemi

Chevron is a big part of all of the communities. We have a lot of employees here. And in addition to just employing people, we also want other people in the community to realize what kind of an impact we can have and realize that we are volunteers, we're the people next door. It's important to show that we care about the community and we all love doing this. So it's really an easy thing to do; you've got the blue sky and the green trees, and we want to pass that on to our kids.
