# I am a petroleum engineer

human energy®

My name is Eka Pramana. I'm a petroleum engineer. I really love what I do.

We have thousands of oil wells under our operation. My responsibility is to ensure that all of those wells are really running and producing oil as we expected.

My workplace is the Integrated Optimization Decision Support Center, or IODSC. This decision support center is an innovative solution for how we manage our fields to deliver optimum economic results. Working here is about collaboration with people. We gather a lot of subject matter experts from many disciplines.

We work together to be more responsible to anything happening in our field.

I am a father of three kids. My children will have a better future.

I grew up in my hometown. It's a small farming town, and we only have a very small portion of electricity in our hometown. Very limited resources.

Along the way, I opened my eyes about how energy can improve the quality of our life.

We utilize energy for almost everything: to cook, to warm, to travel – almost everything we do in our daily life.

We are moving forward. And I'm very proud of my contribution to unlock that energy source into the community. And I want to bring pride to my family with my job.
