We are proud to contribute to the UN Sustainable Development Goals (SDGs), which we view as a system of targets and objectives that build on each other to achieve a more sustainable future and make progress toward the global 2030 agenda. We believe the next decade will be full of partnership, action and growth, and we are well-positioned to be part of the solution: Chevron is a company full of doers with a long history of solving complex challenges, and we will continue to innovate for the future.

Chevron touches all 17 SDGs through our day-to-day operations, partnership initiatives and social investment opportunities; however, we focus on five goals discussed on the following page that identify where we believe we can make our greatest contribution. We work with key partners, communities and industry groups to maximize positive outcomes and continually deepen our understanding of sustainable development.
SDG 3:
good health and well-being
ensure healthy lives and promote well-being for all at all ages

Chevron continually invests in programs that create local partnerships and build capacity, such as Chevron Australia’s new Innovate Reconciliation Action Plan (RAP). We partner with the Heart Foundation to support the Pilbara Aboriginal Heart Health Program and fight heart disease, which is the leading cause of death for Aboriginal and Torres Strait Islander Australians. We work with local leaders, such as Yorga Djenna Bidi graduates, and community groups to deliver culturally appropriate heart health activities and education to help reduce cardiovascular disease and close the gap in life expectancy among the Onslow, Karratha and Roebourne communities in Western Australia.

SDG 4:
quality education
ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Chevron invests in a comprehensive range of education activities. We encourage students to pursue STEM opportunities; we provide career, teacher and technical training; and we form innovative partnerships with universities and other stakeholders.

Chevron’s Enjoy Science Project is a $30 million, five-year program to strengthen STEM and vocational education across schools in Thailand. Through collaboration with partners in civil society, academia, the private sector and government, the program is on track to improve STEM instruction at more than 600 schools, build capacity for approximately 10,000 teachers and directly impact 500,000 people.

SDG 7:
affordable and clean energy
ensure access to affordable, reliable, sustainable and modern energy for all

At Chevron, we deliver the energy that improves lives and enables human progress. There are 7.6 billion people on the planet today. By 2040, there will be over 9 billion, leading to a 30 percent increase in energy demand. Yet even today, nearly 1 billion people have little or no access to affordable and reliable energy. We leverage our people and expertise to solve this complex problem by developing more energy while protecting the environment.

SDG 8:
decent work and economic growth
promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

In February, Chevron announced a $5 million grant to Catalyst, a global nonprofit advancing workplace gender equality with whom we partnered in 2016 to launch the Men Advocating Real Change (MARC) global program. The grant, the largest Catalyst has received in its more than 50-year history, will allow the organization to continue its groundbreaking research, programming, products and events aimed at accelerating gender inclusion across all industry workforces.

SDG 13:
climate action
take urgent action to combat climate change and its impacts

Chevron is working to address the impacts of a changing climate by delivering affordable, reliable, ever-cleaner energy; reducing our own emissions; and investing in lower-carbon energy breakthroughs. To learn more about how we’re addressing climate change, go to chevron.com/climatechange.
