Wheatstone Project Update
August 1, 2014
Work On and Around the Plant Site

- The Wheatstone Project is 40 percent complete.
Offshore Drilling

- The offshore drilling campaign continues, with five of the nine development wells drilled to the top of the reservoir.
Subsea Equipment Testing

- Factory acceptance testing is complete for the first of the subsea trees.
Platform Construction

- Piping, electrical equipment and living quarters are being installed on the platform topsides (left) at the DSME shipyard in Okpo, South Korea. The steel gravity structure is being prepared for delivery (right).
Trunk Line Installation

- The offshore portion of the 140-mile (225-km) trunk line installation was completed in June (left). The trunk line was pulled through the micro-tunnel at the shore crossing (right).
The Materials Offloading Facility began receiving cargoes in April, including heavy lift equipment and the first LNG Train 1 compressors.
LNG Plant Site–Piling Works

- More than 70 percent of 27,000 piles are now in place. These will support the foundations of onshore and marine infrastructure.
The first of six refrigeration compressors associated with LNG Train 1 have been installed. Work continues on the foundations of LNG Train 2.
LNG Storage Tanks

- Commenced pouring the concrete walls of LNG Tank 1 and continued work on the foundation of LNG Tank 2.
